Objective

Full-Stack Web Developer building production-ready web and hybrid applications, turning workflow designs into secure web platforms. Skilled in PHP, JavaScript, Bootstrap, MySQL, and familiar with Flutter and Firebase; experienced in backend development, frontend UI, deployment, and performance optimization to deliver secure, scalable systems.

Experience

- **Smart Logistics and Services LTD** Dec 2025 -
Senior Web Developer
 - Developed and deployed the company's public website (smartls.cm), integrating it with a custom-built Logistics ERP system to enable customers to request quotations, track shipments, and interact with operational workflows through a secure web interface (Bootstrap, PHP, MySQL, Google Maps API, location-based auto-fill API).
 - Architected and implemented an enterprise-grade Logistics ERP platform managing the full shipment lifecycle, costing, pricing approvals, operational execution, invoicing, and margin analysis (PHP, MySQL, REST APIs, role-based authorization).
 - Engineered secure API integrations, approval-state enforcement, and audit trails, ensuring operational transparency, controlled pricing processes, and end-to-end financial accountability.
 - Enhanced operational efficiency and customer experience by enabling real-time shipment tracking, automated quotation generation, and structured workflow control, reducing quotation response time by 30% and improving data accuracy for invoicing and reporting.
- **Horizon Segment LLC** Sep 2025 - Nov 2025
Web Developer and Administrator
 - Developed and maintain the company's official website using Bootstrap, ensuring a responsive, modern, and user-friendly interface.
 - Build and manage backend functionality with PHP, handling form submissions, data processing, and server-side logic efficiently.
 - Implement SEO strategies and Google Search Indexing to enhance the company's online visibility and search ranking.
 - Optimize website speed and performance using image compression, caching, minified scripts (CSS/JS), and server-side optimization techniques to ensure fast load times.
 - Ensured data protection and website security through SSL encryption, regular backups, secure user authentication, and input validation.
- **Denurx Technology** Feb 2023 - Dec 2023
Senior Web Developer (Remote)
 - Led full-stack development of a healthcare platform connecting nurses with clients, building responsive UIs (HTML5, CSS3, JavaScript, jQuery) and secure back-end logic (PHP, MySQL) for authentication, scheduling, and data management.
 - Integrated PHPMailer for email verification, custom dashboards for admins, nurses, and clients
 - Integrated Geolocation API for location-based nurse-client matching.
 - Integrated Paystack Payment Gateway to handle real-time transactions securely, including validation and tracking of all payments.

Projects

- **Savings and Referral Platform**
 - Designed and developed a Savings and Referral web platform with a dynamic frontend and a secure PHP/MYSQL backend, and an admin dashboard to track transactions, referrals, and payment requests.
 - Implemented referral tracking using auto-generated referral link, and an incremental counter with JavaScript to increase savings based on user referrals and payments.
 - Automated withdrawal requests by generating a spreadsheet (via a single button click) that connects with the Paystack API to initiate and process real-time payments

Education

- **University of Benin, Benin City.** 2018 – 2024
B.Eng Computer Engineering

Skills

- Web App Development: HTML, CSS, Bootstrap, PHP, JavaScript, Ajax, jQuery, Github
- Other Skills: Flutter, Firebase, Computer repairs and system diagnosis.
